APPLICATION FOR LEASE OF ROAD ALLOWANCE OR SURVEYED HIGHWAY

Notice is hereby given that Martin Hecktor of Carbon, Alta. has made application to the Minister of Public Works, Edmonton for a lease of the following road allowance or surveyed highway, viz., between the N.W. 8-23-23W4 and S.W. 17-29-23W4.

Any protest against the granting of the above mentioned lease must be forwarded to the Minister of Public Works, Edmonton, within thirty days from the date of this notice.

Dated at Carbon, Alta., this 14th day of June, 1946.

M. HECKTOR, Applicant.

Card of Thanks

Glen Levagood wishes to thank the United Church Young Peoples Society and the Carbon Sports Club for the flowers received while he was confined to hospital in Calgary.

Farmers Sports Successful

The Farmers' Holiday was a grand success. Just think, folks, a swell morning and afternoon followed by about two and a half inches of rain. Swell, wasn't it?

The ball games were well attended, while it appeared that every kid in the grounds had money to burn after the races were over. We regret to mention however, that Neut Wright failed to win the race for those under six years of age while John Atkinson Sr., was left at the starting line.

Much water was drunk by those swimming in the pool, and all voted it of fine flavor.

The day provided an excellent opportunity for all to get together and chew the rag. Everyone appeared to be in excellent spirits, some coming from considerable distances away.

Program Presented Achievement Day

On Wednesday afternoon, June 19th, the elementary teachers of the Carbon school presented a short program in Room Two as a prelude to the inspection by parents and friends of the Achievement Day display. Mr. Lambert, principal of the school explained briefly the aims, motivation and outcomes of several enterprises covered in the course of the year's work, after which Mr. Todd escorted the guests to the display room.

The work of Avondale, Garrett, Webb, Hesketh, Orkney and Mosher schools, together with work from rooms 1, 2 and 3 of the Carbon school made a most interesting and educational exhibition.

It was to be regretted that Mr. Watkins, inspector of schools, was unable to arrive until later in the afternoon.

The interest shown by everyone present was very gratifying to the teachers.

THE WORLD OF WHEAT

By H. G. L. STRANGE

Would \$2.18 Be Harmful To Farmers?

Some persons are telling us that 2.18 wheat, present world price, would be harmful if our farmers received it. These persons argue that high wheat price in 1920 were harmful to farmers inasmuch as these high prices were followed by wheat at \$1.10 twelve months afterwards. This I suggest, is a fallacious argument for in 1920 the prices of all commodities in all countries of the world fell, many of them lower in proportion than wheat (and the same was true of the price falls in the depression of the "thirties.")

The truth is that the price of wheat today has nothing to do with serious price declines that may occur later. Prices are made by world conditions. If conditions warrant a rise, price will rise. If conditions warrant a fall, price will fall, not only in wheat but in all commodities.

All that happens when prices are fixed by governments lower than the world market price is that farmers lose just that amount of money at that time, and they will never receive a higher price later to make up for the loss. The world today is paying \$2.18 a bushel for American wheat. Why should not our prairie farmers also receive this price from these same overseas purchasers?

Crop Report

Compiled from the records of 653 governmental and Searle Rain Gauges.

The moisture situation over the west as a whole declined 2 percent this last week, the over-all general condition now standing at 83 percent compared with 85 percent last week and 85 percent at this time a year ago.

The moisture condition for Alberta now stands at 86 percent of normal compared with 88 percent last week and 78 percent at this time a year ago.

If the west is to enjoy an average wheat crop of 17 bushels to the acre, then considerably greater than average rains will have to fall for the rest of June and for the whole month of July. Since this report was released over four inches of rain has fallen in the Carbon district.

I like mathematics when it isn't over my head. And that's the way I feel about pigeons, too.

Farmers May Take Strike Vote

Mass Meeting in Scout Hall July 3

To all farmers in the Carbon District whether you are a member of the Carbon Local of the A.F.U. or not will you read this through to the bitter end, and for that matter all of the business men of the town too.

There will be a Special Meeting of the Carbon Local on Wednesday next, July 3rd, at 8.00 p.m. sharp in the Scout Hall. For the intention of taking a vote for the purpose of a non-delivery strike. Farmers have been talking of having a strike for a long time now, and we have recently received a request from our headquarters for this vote to be taken to find out the feeling of the farmers throughout the Carbon district. Whether you are a member or not, you are urgently requested to appear at this meeting, for it will be futile of you to express your views after the meeting if you did not attend.

So many of the commodities that we have to buy have steadily during the war risen and now that the war is over prices have been rising in leaps and bounds though the sum that we receive for the products that we have to sell has remained fairly constant. As an example, are you satisfied with:

1. the 2c raise in gasoline;
 2. the raise in machinery price and repairs;
 3. the price of lumber;
 4. the present form of taxation
 5. the gathering of income taxes over the last 4 years?
- to quote just a few examples. On the other hand we have the low price we receive on wheat and other grains, hogs, beef and eggs, etc. Just consider that England is going to pay their farmers \$2.00 for their wheat; France \$1.78; United States \$2.18—and Canada who provided huge piles of wheat when it was most wanted and who gave (at the expense of the farmers) millions of bushels to Greece. Yugoslavia and Britain and obtained this wheat in spite of a curtailment of manpower—we say that Canada magnanimously pays her farmers 69c lower than the lowest price quoted. In other words our Federal government is trying to be a good sport at OUR EXPENSE.

How many of you have running hot and cold water on your farms (except when the roof leaks or you upset a kettle of water)? How many of you have all your buildings in good repair and painted. Can you afford to hire men to help you with the work? Have you machinery that is up to date and in excellent repair? Are your fences in proper repair? In short, even if you are married, can you afford to feed your wife?

Now farmers. You are notoriously independent and as a rule don't give two hoots about our neighbors and even if you did you would probably want one of them back. Forget your independence for the present and remember that only through helping your neighbor willingly and co-operating with him will you really get somewhere in this farming gamble. Come to this meeting and bring your neighbors. Allow none to stay home. If you are at all interested in your wife and children, if you are interested in providing for your old age, if you are interested in obtaining some of the comforts of life—such as the average city dweller

has, then turn out.

Miss this opportunity and it may be years before it will come again, so come and decide.

If a strike is held it will in all probability be to obtain parity prices. If you do not understand what parity prices are, attend the meeting and you will soon learn.

Bring your wives as well. They are just as much concerned as we men are, and their opinions are just as valuable. So wives, when you read this make your man take you that evening.

We expect that the Scout Hall will be packed so to get a seat you had better be there in good time.

Card of Thanks

Mrs. George Trepanier wishes to thank the Carbon Old Timers' Association for the flowers received while she was in the Drumheller hospital.

It is suggested in Ottawa that some of the addresses in Parliament during this session should be broadcast over the air and this seems to be another of those sound propositions in this nation's capital!

WORLD HAPPENINGS
BRIEFLY TOLD

Soviet scientists are perfecting television sets for examining ships' hulls and objects on the bottom of the sea Moscow radio said.

Special clothing coupons were issued flier Jim Mollison when thieves stole his clothes from a car just before he left London on a flight to India.

Returning from fishing in the English Channel, a boat brought back a 50-pound bomb from the sea-bed. A bomb disposal squad dealt with the "catch".

The Japanese Government will collect from three special taxes approximately 90,000,000,000 yen (\$6,600,000,000), or one-fifth of the country's total wealth.

One of mankind's worst disease pests—the common cold—soon may be shackled by science, Dr. Selman A. Waksman, discoverer of the drug streptomycin, predicts.

The Swiss government has decided to release 10,600 tons of food for distribution to undernourished children in Europe as part of its "save 1,000,000 children" campaign.

Mrs. Mary Crawshaw, 74-year-old flying grandmother, arrived at Bristol, England, after a 6,500-mile trip by air from Edmonton, Mrs. Crawshaw travelled alone to visit relatives in England.

The government of India has announced it will send medical aid and drugs for treatment of ailing Indians in Malaya, particularly Indian laborers who were employed on the Burma-Siam railway.

The new 1,480-foot British-built bridge over the Rhine at Cologne will be named "Patton Bridge" in memory of the late George S. Patton, Jr., and "in fitting recognition of his brilliant dash to the Rhine," the British Military Government said.

Carry Out Tests

Find Germs Often Just Thrive On Dosing Of Drugs

A danger area in which the new drug streptomycin increases rather than decreases deaths from infection was reported by United States Food and Drug Administration researchers. Penicillin, another war-born drug, may also have this effect, the report added on the basis of preliminary studies.

Carrying out tests on more than 2,000 mice, the scientists found the amount of streptomycin used determined whether the drug killed or cured. Disease-fighting concentrations lie relatively close to those that stimulate disease.

So far, this theory has not been tried out on humans, but Dr. Henry Welch and his co-workers in the division of penicillin control and immunology, declare it is "entirely logical" that "improper dosage . . . may lead to undesirable results."

Results in the treatment of typhoid fever and undulant fever in men and women have been unexplainably erratic: some patients are cured, others show no improvement even after large doses.

Dr. Welch suggests in the Journal of the American Pharmaceutical Association that under certain conditions streptomycin actually increases activity of the germ it is being used to fight. He could not explain this quirk of the drug.

Was Furious

Queen Victoria Was Violently Opposed To Women's Rights Movement

"Queen Victoria Was Furious" was the title given to a short series of feature broadcasts for London's overseas audience. The three programs were about three women who devoted their lives to the cause of women's emancipation, and who worked closely together.

The reason for the title is that women's emancipation had no fiercer opponent than Queen Victoria.

When the movement began to make some headway she declared she was "most anxious to enlist everyone who can speak or write to join in checking this mad, wicked folly of Woman's Rights, with all its attendant horrors, on which her poor, feeble sex is bent, forgetting every sense of womanly feeling and propriety. It is a subject which makes the Queen so furious that she cannot contain herself. Woman would become the most hateful, heartless, and disgusting of human beings were she allowed to un-sex herself; and where would be the protection which man was intended to give the weaker sex?"—BBC Bulletin.

Oil seeping from the ground was used by the Indians as salve and medicine. 2675

AYLWIN, QUE., IS BIRTHPLACE OF STRANGE LITTLE CALF.—Angus of Aylwin, the little calf shown above, was born at Aylwin, Que. He had a full-blooded moose for a father, and his mother, Moosie, shown with him, was three parts moose; grandmother, half moose. Ann Just is seen with animals on Freeman Cross' farm.

Freemen Of London

Receive Book Of Rules Which Is Masterpiece Of Brevity

On his admission to the freedom of the City of London every freeman is presented with a little red book lettered in gold under the City arms, and entitled, "Rules for the Conduct of Life". There are 38 rules in this little treatise and they are a compound of shrewd worldly wisdom begotten in experience and the piety and fear of the Lord that were characteristic of our forefathers. No name appears as the author of the book and it has neither introduction nor dedication. It is a masterpiece of brevity.

The Egyptian King Rameses II was the first to excavate a canal between the Mediterranean and the Red Sea.

Just Scraping Noise

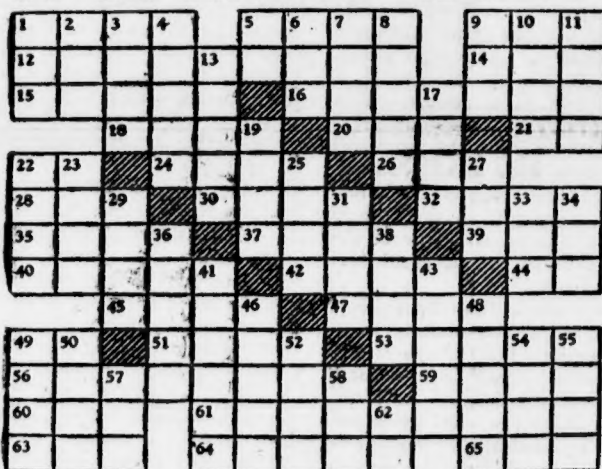

Is How Famous Violinist's Music Sounds To His Children

Yehudi Menuhin's playing may be to most people the world's greatest violin music, but to five-year-old Krov and six-year-old Zamira—his son and daughter—it is "just an old scraping noise," it is reported. The youngsters solemnly told a reporter that "Mummy" at her piano plays much better. Both parents say it is wrong to teach music to an unwilling child. "It spoils them for life," said Mrs. Menuhin. "They enjoy music more if it is not forced on them early in life," said the father.

POPULATION OF JAPAN

The population of Japan is 73,110,995, a Government census showed, compared with a pre-war population of 72,875,800.

New Constitution

Malcolm MacDonald Installed As Governor Of Malayan Union And Singapore

Rt. Hon. Malcolm MacDonald, former British High Commissioner to Canada, was installed as Governor-General of the Malayan Union and Singapore.

The ceremony took place in the same municipal council chamber where Japanese representatives signed surrender terms eight months ago.

The Malay Sultans were not present at the installation ceremony, nor did they send representatives.

Mr. MacDonald is the first Governor-General of the Malayan Union and Singapore. A British White Paper Jan. 22 outlined a new constitution which provides for regrouping of the Malay states and the Straits Settlement into two administrations—a Malayan union and Singapore.

The new constitution has aroused some opposition based broadly on the belief that the Sultans, whose status it is proposed to put into a new relation with Britain, were "hustled" into agreement with the Government.

For Extra Help

Farmers Who Serve Twelve Meals Can Obtain Ration Books

Farmers who find it necessary to serve twelve meals or more to their temporary hired help may apply to the wartime prices and trade board for what are called transient labor rations.

Where the person hired by the farmer for extra work stays longer than two weeks, the farmer is authorized to make use of his employee's ration book. In this way the employee is considered a member of the household, and the farmer may use his meat, sugar-preserves and butter coupons as they become valid.

OUR COMPLETE SHORT STORY—

VERY DEAR

By BILLIE LONGWELL

Copyright
Wheeler Newspaper Syndicate

THE girl, sitting in the cocktail lounge, was conscious of someone leaning over her table. She stopped searching for matches in her pocketbook and looked up.

He stood there tall and straight wearing a first lieutenant's uniform. His face was grave but pleasant. He said, "Everybody in this place is talking to someone. May I talk to you?"

She didn't answer immediately. Her eyes closed to narrow slits. A flush crept over her face. Nervously, she brushed her hair back from her forehead when she finally said, "I guess so," he already was seated.

He suggested another drink. She nodded assent. He said, "My name is Peter and I am going to kidnap you."

At that she laughed. "My name is Julie and I'm making a train in exactly half an hour."

"Hmm, Julie! I always liked that name. You are going home?"

"No, I live here."

"But your accent is southern."

"My parents live in the south. That is where I'm going."

"That is where you were going," he said with a grin. "Remember, I'm going to kidnap you."

She glanced at the clock, raised her glass in a silent toast. "I must hurry."

"Oh no, Julie. You have some questions to answer," said Peter Granville. "Are you married to a northern?" she nodded negatively.

"Engaged?"

"No."

"Good, you are practically kidnapped," said Peter with enthusiasm. Intercepting her second glance at the clock, he asked, "You wouldn't run away from a soldier whose leave ends at midnight tomorrow, would you?"

She abruptly set down her glass and looked at his five battle stars and purple heart medal. "No," she said in a low voice, "I wouldn't run away. Where do you want to go from here, lieutenant?"

He reminded her that his name was Peter. And he mentioned a spot on the east side which used to serve the best steaks in the world and was frequented by "newspaper people".

"That is the place for us," she said, "if it is what you want."

Walking from the lounge, he put his arm through hers and held her hand.

"Peter," she asked suddenly, "are you married?"

"No, though I was once. But she couldn't bear me."

She pressed his hand. "She must have been crazy."

"No," Peter disagreed, "she was very sweet fundamentally. A little too young and perhaps a little spoiled. Also, I was eight years younger than I am now and a newspaper reporter slightly on the screwy side. I blamed her terribly at first. But, later on, learned better. She didn't know the score and I didn't make much of an effort to straighten her out. She hadn't been around much and she believed we were all squirrels."

"I see," she murmured. They got into a cab. "You make a great many excuses for her."

He gave her a level look. "She was very dear to me. How dear I didn't realize at the time."

Changing the subject, he asked why she had come to New York.

"There were many reasons," she said softly, "but mainly I wanted to change myself."

"Change yourself?"

"Yes," she continued gravely. "Once a man I was very fond of accused me of being a self-centered little snob who didn't do much more than show horses, dance, and get into tantrums."

She laughed self-consciously. "Eventually, I understood he was right so I tried to do something about it."

"And did you succeed, Julie?"

"I believe so. At any rate, I have made friends in and out of the store where I have been working. And, so far, I haven't been fired for getting into tantrums."

"We're here, bud" the cabbie interrupted.

"Julie," he said then stopped, after he paid off the car.

"Julie," he repeated, removing his overseas cap, "steak suddenly doesn't appeal to me. It now is almost midnight and I only have until this time tomorrow. Will you think I am an awful wolf if I ask you to come with me to the borrowed apartment I am

staying in and answer some of the hundreds of questions I want to ask you?"

"No Peter," she answered, without hesitation. "I won't think you are a wolf."

"Good gal," he declared, jauntily restoring his cap and waving for a cab. She watched him and smiled. They rode in silence to the apartment but once inside Granville he held her close.

"You know Julie," he said, "you are making my last hours here perfect."

"Sit down, Peter," she said drawing him toward the davenport. "You told me about your ex-wife. Now I'd like to tell you about my ex-husband." She gazed straight ahead and spoke in quiet, unemotional voice. "Finally I realized my own faults, too. I was selfish and possessive. I resented his pals; they seemed to have more in common with him than I did, and though he was very dear to me, we crashed."

"But," she turned to the silent man, "even now, four years later, I still remember the way he cocked his hat, the way he suddenly burst into songs—even the way he always left the top off the toothpaste which never failed to annoy me. And I insisted on calling him by his first name, Cornelius, which he detested. I thought it dignified." She smiled wanly, reaching for a cigarette.

"Silly, wasn't it? We really did have our moments, like wonderful days by the sea."

Taking the cigarette from her fingers, he pulled her into his arms and kissed her.

"Young and inexperienced, Julie, I would say." He put his hand under her chin. You are very dear to me, Julie, and I want you very much. Am I going to have you?"

"Oh, Pete," she answered. "I'm all yours. Furthermore, I promise not to get annoyed if you leave the top off the toothpaste." She moved closer. "Whatever made me like the name Cornelius?"

He held out his dog tag for her to read: Cornelius Peter Granville.

"It looks, darling," he laughed, "that when the marriage bureau opens tomorrow you'll get that dignified name again."

"Oh, no," she exclaimed. "I've really changed, darling, and this time we are not going to crash. I'll just be the wife of Pete Granville, newspaper reporter, now on leave to the Army."

SELECTED RECIPES

EGGS A LA MODE

Translate that little phrase "a la mode" literally, and it means "in fashion". Right now, eggs—almost any way you like them are "a la mode", and there's an abundance of them on the market.

Eggs are a fine source of protein and contain essential vitamins and minerals. But those are things to keep quietly in the back of your mind. Just serve a dish as tasty and delicious as Baked Cheese Eggs, and there'll be no need for urging on your part to get anyone to finish and ask for more.

Baked Cheese Eggs

6 eggs
2 tablespoons sharp cheese spread
2 tablespoons salad dressing
2 tablespoons finely chopped green pepper
2 tablespoons finely chopped celery
1/4 teaspoon salt
Pinch of pepper
1 cup corn flakes
1/2 teaspoon melted butter
Cook eggs in water just below boiling point about 20 minutes. Cover with cold water; remove shells. Cut eggs in halves lengthwise and remove yolks. Mash yolks and combine with cheese, salad dressing, green pepper, celery and seasonings. Refill egg whites, rounding up filling. Place in well-greased shallow baking dish. Crush corn flakes into fine crumbs and mix with butter. Sprinkle buttered crumbs over eggs. Bake in moderate oven (375 deg. F.) about 15 minutes.
Yield: 4-6 servings (12 halves).

CLOSE BARS IN MEXICO CITY—MEXICO CITY.—The city government ordered the shutdown of pulque bars in the poverty-stricken sections. Housewives had complained that their husbands wasted time and money drinking the potent beverage fermented from maguey root juice. A glass of pulque costs two cents.

London has approximately 7,000 telephone operators. 2675

A Busy Attache

Washington Star Tells Story About Visitors To Mexican Embassy

A writer in the Winnipeg Tribune says he is torn between admiration for the speed and imperturbability of the Embassy attache, and sympathy for the frustration which arose in the minds of the callers in the following item from the Washington Star: A short, swarthy man appeared at the main door of the Mexican Embassy here when two Washingtonians called recently for some vacation information. "Sorry," he told them, "you will have to ring at the Embassy office the other side of the building." The two walked around the building and rang at the office door. The same short man answered, not a bit out of breath though he must have dashed madly through the Embassy to get to the other door in time. "Sorry," he told the callers, "the office is closed for the day."

World Famine

Scientists Say That Mice, Bugs And Other Pests Destroy Huge Quantities Of Grain

World famine? Scientists say there is more than enough grain in the world to feed all hungry people—except for mice, bugs and other pests.

The scientists reported to the United Nations Food and Agriculture Organization that rodents, insects, mice and fungi moulds destroy, after harvest, one-tenth of the 725,000,000 tons of cereals, peas, beans and oil seeds produced each year.

Thus this year's estimated loss of 72,500,000 tons is more than seven times the 10,000,000 tons of wheat the world will be short this year.

Rodents alone will eat 25,000,000 tons and insects will destroy 36,250,000 tons, the scientists said.

North America has more species of game birds than any other continent.

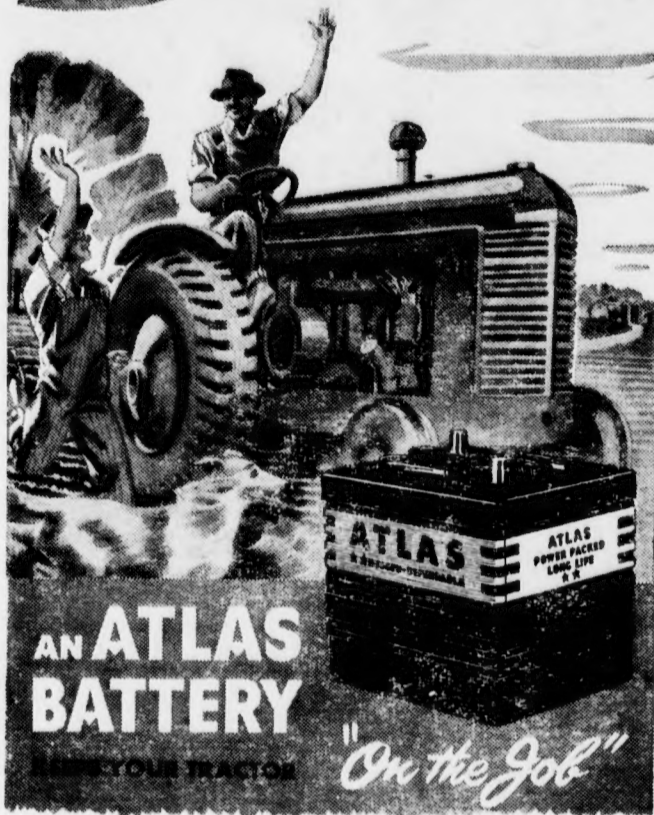

USING YOUR EYES TOO MUCH?

Modern life makes big demands upon the eyes: but two drops of Murine will cleanse, soothe and refresh them when they are tired or irritated. Eyes are rationed—two to a lifetime—so take good care of them. There are seven important ingredients in Murine: let this safe, dependable lotion help your hard-working eyes; use Murine every day.

Extend Highway In North

An all weather highway from Edmonton to Grand Prairie will be completed this summer according to information received by the Alberta Motor Association from the provincial public works department. The distance is 385 miles.

This will be realized when graveling is completed this season on the remaining 40 mile stretch of highway from High Prairie to Grand Prairie. Graveling has started already on this project and will be carried out by public works department crews and not by private contract.

Of the remaining 48 miles from Grande Prairie to the B.C. boundary the road is gravelled for 26 miles. The remainder is mostly dirt road on which some grading was done last year.

Various organizations including tourist promotion authorities are making representations to the B.C. government to improve the 30 mile stretch of road from

the B.C. boundary to Dawson Creek the southern end of the Alaska highway.

Conservation at Teas Urged

Women in all parts of Canada are fully alive to the urgency of the Dominion's "Save Food" campaign. This is apparent from the many varied queries received in the daily mail of the Food Information Committee at Ottawa.

Among recent letters addressed to the Committee was one from a member of a women's church association, who wrote in part: "Our group of women still insist on serving sandwiches, cookies and iced cakes at monthly meetings. The monthly fee of fifty cents, I am sure, would just as willingly be paid and the social spirit be preserved if one piece of bread, a cookie or one piece of cake were served. Our women say, 'Well, all the other churches do it. If the rest stopped, so would we. Perhaps you can do something to appeal to these women—reaching across the Dominion it would be well worth while.'"

This is only one of numerous letters from women who feel there should be greater food conservation at teas and club meetings—women who when over they eat and wherever they eat wish to share with the hungry. "Many women have probably never thought of the refreshments served at their meetings in terms of the wheat which is so desperately needed to feed the famine areas, or they would willingly reduce these refreshments," says the Food Information Committee. "Those two or three sandwiches and those two small pieces of cake usually eaten by each one of a group of fifty people represents approximately four and a half pounds of flour, and those four and a half pounds of flour could provide the daily bread ration of twelve hungry Greeks."

Women's organizations across the country to this country's "Save Food" campaign, the committee points out, and gatherings should gain, rather than lose, in friendliness by this sharing with the hungry.

DIET AND EDUCATION

A good breakfast is essential if children are to do better school work and bring home better report cards. Nutrition authorities suggest that a good breakfast should consist of an orange or tomato juice, a whole grain cereal with milk, bread, and a glass of milk or cocoa.

PLAYING FOR HEALTH

As a holiday suggestion officers of the Physical Fitness Division of the department of national health and welfare suggest that some of the family allowance cheques be used to purchase sports equipment. Urging all Canadians to have fun and feel better, Ottawa reminds people of the Dominion that it pays to be healthy.

AD-56

MARGARET AITKEN, newspaper columnist, presents a daily three minute commentary of news from the woman's point of view over the CBC Trans-Canada network, Monday to Friday at 4.15 p.m. Miss Aitken's series to run from June 3 to August 30 precedes the regular 4.18 p.m. talk programs arranged especially for Canada's homemakers.

NEW BABY NEEDS A RATION BOOK

Like other citizens the new baby is entitled to his or her own ration book. It will be needed to purchase sugar, canned syrup and other items for the baby formula as well as many of the canned foods that will become a part of the diet list within a few months. Applications for the book should be made out on form RB 64 at the local ration office. The forms are available at most hospitals and maternity homes. The form should be accompanied by a birth certificate or by a letter from a doctor. The doctor may sign the form itself in a space provided for that purpose and no further certificate will be necessary.

WHAT CAN YOU SPARE THAT THEY CAN WEAR?

The clothes you no longer wear are desperately needed by the suffering millions in lands ravaged by war. Every garment you give means one more human being saved from cold, sickness and possibly death. Make up a bundle now of spare clothing. Take it to your nearest Post Office or Collection depot.

**"SALADA"
TEA****Must The Consumer Pay?**

LABOR MANAGEMENT DISPUTES have reached alarming proportions on this continent during the past year. So far, the situation has been much more serious in the United States than in Canada, but American labor troubles have affected us here by cutting off the supplies of certain products and raising the prices of others. Strikes have taken place in a number of Canadian industries also, and there appears to be a general move on the part of labor to improve wages and working conditions at this time. Under the democratic system of government in which we believe, no one would deny the right of workers to strike for what they believe to be their rights, but it is an open question if there is a great need in many cases for drastic adjustment of labor management relations.

**Trend Viewed
With Alarm**

The trend toward higher wages in industry cannot be viewed except with some alarm by wage earners and other workers in moderate income groups. They realize that increase in the cost of labor will inevitably cause a rise in prices which will pass from the manufacturer to the wholesaler and then to the retail merchant. In the end, the consumer will pay more for products so affected, and unless the general level of income is raised to meet these increases, considerable hardship will result for a large part of the population. If, on the other hand, incomes are stepped up to meet the rise in price levels, the dreaded spiral of inflation will have commenced and there will be little hope of stopping its ruinous course. During the war, Canada's system of price and wage control and her anti-inflation measures were looked upon as the best that had been worked out for any nation. With the unavoidable loosening of some wartime controls and the rise in labor management disputes, however, it is now questioned whether it will be possible to avoid a state of inflation much longer.

**Very Real And
Serious Menace**

A serious view of the situation is being taken by consumers, and especially by those in moderate income groups. This includes many farmers who will be adversely affected by increased prices on manufactured goods. In Alberta recently, the matter was discussed at a meeting of representatives of farm organizations where it was made clear that the present threat of inflation is regarded as a real and serious menace. It is said that labor management difficulty is an unavoidable aftermath of war. It must not be forgotten that in Canada labor was solidly behind the war effort, and it should also be remembered that there may exist injustices in regard to wages and working conditions which warrant action on the part of labor organizations. That, however, is only one section of the population, and unless means are found to offset the effect of higher production costs on the prices of consumer goods, we will have either widespread dissatisfaction and hardship, or the disaster of inflation.

This Atomic Age**It Is Improbable That Man Could
Destroy The World**

"Although man thinks he has altered the earth considerably, is inclined to believe he owns it and, in this atomic age, may even boast he can destroy it, his million years of recent past is but a flash in the pan to what preceded him, said Dr. E. S. Moore in his presidential address to the Royal Society of Canada, meeting in Toronto.

Dr. Moore spoke of rock formations found in Eastern Ontario and Southern Quebec indicating life of some kind, probably plant life, existed approximately 1,800,000,000 years ago.

As to the possibility of man destroying the planet, Dr. Moore said geologists and physicists agree it is "most improbable" that one terrible atomic blast could blow up the earth. There is so little fissionable material, such as uranium and thorium, scattered through the mass of inert material that makes up the earth that any explosion would not be propagated, resulting in a purely local effect, he explained.

**Price Control
And Rationing
Information**

Q.—When will the second lot of
canning sugar coupons become valid?

A.—The five extra sugar-preserves
coupons which may be used to secure
sugar for canning will become valid
on July 4.

Q.—Is strawberry and raspberry
jam still under the ceiling price reg-
ulations?

A.—Yes, all jam remains under the
ceiling. Fresh strawberries and
raspberries have, however, been re-
moved from the ceiling.

Q.—How many butter coupons be-
come due in the month of June?

A.—Three butter coupons become
valid in June—R10 on June 6, R11 on
June 13 and R12 on June 20.

Q.—Why are unsweetened solid
pack pie peaches in consumer size
tins rationed?

A.—Supplies of all unsweetened
canned fruits are limited and these
types of canned fruits are rationed
to ensure a fair and equitable dis-
tribution to consumers.

Please send your questions or
your request for the pamphlet
"Consumers' News" or the Blue
Book in which you keep track of
your ceiling prices, mentioning the
name of this paper to the nearest
War-time Prices and Trade Board
office in your province.

New Industry**Alberta To Launch \$100 Million
Industry In Wood Products**

A large new industry for Alberta
involving timber purchases of almost
\$100,000,000 and manufacture of
wood products to be distributed on a
continent-wide basis, is likely to be
launched soon, the Edmonton Bulle-
tin said it was learned.

Informed sources said the Do-
minion and provincial governments
and large Canadian financial inter-
ests were behind the project which
will involve purchase of timber over
a wide area of the north country
from High Prairie, Alta., to Dawson
Creek, B.C., and north to the town of
Peace River.

It was indicated plans for erection
of a huge plant for preliminary pro-
cessing and prefabrication which was
likely to be built in the Peace River
area at a point where adequate rail
facilities would be available.

This source said it was under-
stood the wood products to be manu-
factured would be made by a new
process developed as a result of re-
cent scientific research. Articles such
as household furniture and prefabricated
buildings would be turned out.

The project in its entirety would
employ thousands of persons.

A Novel Remedy**Whooping Cough Is Cured By A Trip
In A Plane**

LEICESTER, England.—Flying a
child with whooping cough up to a
height of 12,000 feet and then diving
steeply towards the ground has
proved successful in two cases.

George Derbyshire, Leicester pilot,
did it first for the 18-month-old child
of a friend. Now he has tried it
successfully for his 11-year-old son.
The child coughed as the plane
gained height, but at 12,000 feet the
coughing ceased.

After a steep descent the boy ap-
peared to be cured.

A NATURAL TRAP

There is an albatross trap of natu-
ral formation in Australia. The birds
dip between the walls of a steep-sided
valley and, because of the lack of
wind, lose altitude so rapidly that
they crash against a cliff at the end
of the enclosure.

"A1 Quality

**"Wait Oscar — I gotta better idea. Throw in this package of
crisp, crunchy Grape-Nuts Flakes — 'n' if THAT comes out you
better leave town"**

"Now you're talkin', Joe! The little
woman might toss my hat out again
but she'll never part with a package
of matty-rich, nut-sweet Post's
Grape-Nuts Flakes. And while she's
fondly caressing 'em, I'll sneak up-
stairs to bed."

"Sure enough these Grape-Nuts
Flakes are wonderful smile bait. And
they stick-to-your ribs, too — with
carbohydrates for energy; proteins

for muscle; phosphorus for teeth and
bones; iron for the blood; and other
food essentials."

"My wife knows that Grape-Nuts
Flakes are doubly good because
they're made of two grains—wheat
and malted barley—cleverly blended,
baked and then toasted for matchless
flavor, delightful crispness, easy diges-
tion. Those recipes on the package for
cookies and other good things will
catch her eye, too!"

SMILE AWHILE

Tourist: Any big men born
around here?

Native: Nope. Not very pro-
gressive 'round here; best we kin
do is babies. Diff'rent in the city,
I s'pose.

Johnny: "I fell in a mud pud-
dle."

Mother: "What, with your new
pants on?"

Johnny: "Yes, I fell so fast I
didn't have time to take them
off."

"What would you do if you
married a rich woman?"

"Absolutely nothing."

"Don't you find writing a
thankless job?"

"Quite the contrary, everything
I write is returned to me with
thanks."

George: "But I thought you had
forgiven me for that, and promised
to forget it."

Ethel: "Yes—but I didn't prom-
ise to let you forget I had forgiven
it!"

Tourist (in village store):
"Waddya got in the shape of
automobile tires?"

Clerk: "Funeral wreaths, life
preservers, invalid cushions and
doughnuts."

Teacher (in junior high school)—
"Paraphrase the sentence: 'He
was in high dudgeon.'"

"He was in a cell on the top
floor."

"You cannot have your puppy
in the house," said the harassed
housewife. "He will whimper at
night."

"But we can turn on the radio,"
replied the tot, "then nobody will
notice the other noise."

The doctor's young son was
showing a playmate around his
father's office. The lad spied a
mounted skeleton and asked where
it came from.

"He's had it a long time. I think
it's his first patient."

Mrs. Higgs and her neighbor
met in the fish queue.

"What's your old man looking
so fed-up about, Mrs. Higgs?"
asked her neighbor.

"Well you see, he hasn't got
a job yet, and he feels it very
much that he can't go out on
strike like other men."

Pat: Lend me a shovel to get
my friend out of the bog.

Farmer: How far has he sunk
down?

Pat: Up to his ankles.

Farmer: Can't he get out him-
self?

Pat: Ah, but he fell in head
first.

The Pacific ocean's mean depth is
much greater than that of the
Atlantic.

... TAKE IT OFF!—Wailing in
protest when made to don a lifebelt,
this little crier is one of thousands
of refugees returning from Egypt to
Dalmatia, who were made to don the
belts because of floating mines in the
Mediterranean. The youngster was
born in UNRRA's refugee camp, El
Shatt, in Egypt.

GEMS OF THOUGHT**SALUTARY ADVERSITY**

Sweet are the uses of adversity;
Which, like the toad, ugly and veno-
mous, Wears yet a precious jewel in
his head.—Shakespeare.

Many secrets of religion are not
perceived till they are felt, and are not
felt but in the day of a great calam-
ity.—Jeremy Taylor.

Sorrow has its reward. It never
leaves us where it found us. The
furnace separates the gold from the
dross that the precious metal may be
graven with the image of God.—
Mary Baker Eddy.

The sweetest joys a heart can hold
Grow up between its crosses.

—Nixon Waterman

The happiest, sweetest, tenderest
homes are not those where there has
been no sorrow, but those which have
been overshadowed with grief, and
where Christ's comfort was accepted.
—J. R. Miller.

Blessed are they that mourn: for
they shall be comforted.—Jesus (Mat-
thew 5:4).

REMARKABLE SHEARS

Collier's Magazine says cutting off
trees at their base with a new type
of giant tree shears is nearly as easy
as cutting the stem of a rose with
a pair of scissors. Mounted on a
special tractor and exerting a pres-
sure up to 60 tons the blades of this
instrument can cut down a tree 2½
feet in diameter in 10 seconds.

New Theory Is Advanced To Account For The Huge Craters That Decorate Face Of The Moon

(John J. O'Neill in the New York Herald Tribune)

THERE are some strange markings on the face of the moon that have been there unchanged since men first were able to examine the surface of that planet through their telescopes. How these markings got there is still very much of a mystery. They are described as "rays" and can be seen best when the moon is full. They are white lines radiating from a central point. There are several such central points and the systems of rays suggest that a shower of something came from the focal point and spread itself over a wide area.

These rays have nothing whatever to do with the recent radar experiments in which radio waves transmitted from the earth were reflected back from the moon. The radar waves were sent out on a narrow ray like a searchlight beam, but the rays on the moon were so called because each line radiates from a central point like the spokes in a wagon wheel. The moon "rays" do not move out into space, they stay fixed on the surface of the planet.

The moon rays seem to fit into a theory that they were produced by an atomic-energy explosion in the moon producing the equivalent of a volcanic explosion on the earth. This is part of the more general theory that earthquakes, volcanoes and other seismic disturbances on the earth are caused by atomic-energy activities within the earth, also that sunspots are similarly caused by such activity in the centre of the sun. The atomic-energy seismic theory was put forth cautiously some months ago. It brought no condemnation and a few expressions of agreement from scientists.

A geologist in the Government service working entirely independently arrived at a similar conclusion about the same time. Military authorities, when they saw his report on atomic energy as a cause of geological phenomena, labelled it a top secret and deposited it in the vaults of the War Department for protection.

The moon is covered with craters of all sizes. The small ones resemble volcanic craters on the earth. However, even the smallest crater visible on the moon—two to three miles in diameter—is larger than the largest volcanic crater on the earth.

Some of the craters on the moon have diameters of 150 miles and there are some dimly seen fossil remains of others several times larger. If all the craters on the moon were small, not more than ten times larger than those on the earth, it would be easy to describe them as volcanic craters. If they were such, however, it would be expected that they would be surrounded by lava flows as are the volcanoes on earth. There are no signs of such lava flows, however, with one possible exception and that can be listed as very doubtful.

If they are not volcano craters, then what caused them? The alternative theory is that they were caused by the impact of meteors striking the moon's surface. We have several such meteor craters on the earth, the most famous one in Arizona. During the war we became familiar with pictures of craters caused by bomb explosions. An area subjected to heavy bombing from the air presented a picture very much like the surface of the moon.

The final solution of the mystery of the moon's surface will probably indicate that the craters were formed in both ways—both by volcanic action and impact of meteors. The volcanic action on the moon, as well as on the earth, was probably caused by atomic-energy processes starting deep in the crust and working toward the surface.

There are about 10 craters on the moon surrounded by a definite system of rays, whereas the total number of craters is in the tens of thousands. The craters with rays were undoubtedly formed in some way that differed from the usual process.

It is possible that the ray craters were formed under freak circumstances, a rare combination, for example, of the normal atomic-energy volcanic action and a meteor impact. The meteor may have struck the moon at a point where an atomic-energy area was building up high pressures, punctured the surface and let a premature explosion take place.

This situation can be pictured if we imagine what would have happened in Mexico a few years ago if just before the newly born Paracutin volcano erupted that particular spot had been hit by a giant meteor like the one that created the mile-wide crater in Arizona.

The volcano is being fed by a large underground area of molten rock highly charged with gases and steam, probably produced by minerals in the

earth being set off in an atomic-energy process. The molten rock melted a narrow chimney through the rock crust of the earth through which the rock, gas and steam escaped. The vent was small and only a relatively small amount of material could get through and this encountered considerable resistance so that it had relatively little energy as it shot through the crater of the volcano.

If, however, the giant meteor struck this spot at just the right time, then a vent a mile in diameter would have been created through which the whole force of the underground compressed explosion could have been released in a single gigantic blast. If this took place the eruption would have been over very quickly but debris would probably have been distributed to distances hundreds of miles away.

The three principal ray craters on the moon are Tycho, Copernicus and Kepler, the former being by far the most prominent. Rays from Tycho can be traced across the entire diameter of the moon. The moon has a circumference of 6,800 miles, so material from the Tycho explosion was carried a distance of more than 3,000 miles. There is no air on the moon, so the molten rock comminuted to a fine dust could be blown to great distances without encountering resistance. It was such sprays of dust blown in all directions that probably produced the ray effect as they settled to the surface.

If the full moon is viewed with the eye or through binoculars so that the illusion of the "cow jumping over the moon" can be seen, the location of the three principal ray craters can be determined. The principal one, Tycho, is near the bottom edge of the moon under the mid-section of the cow so the animal looks as if she were being blown over the moon instead of jumping. The other two, Copernicus and Kepler, are located directly behind and slightly below the hump of the cow, which makes it appear as if she were being helped over from this direction as well by an atomic-energy blast.

Exchange Plan

Canada And Great Britain Going To Exchange Teachers

The first party of British teachers to visit Canada on a post-war interchange plan will leave London later this year as Canadian teachers arrive to teach in schools in the London area.

Under the plans of the education committee of London County Council, 10 London teachers will travel to Canada and 28 Ontario teachers will visit England.

CONDEMNED TRAITOR—Prefect of Lyon during the German occupation and already condemned to death as a traitor, Alexandre Angeli faces a second trial before a Paris court after more evidence against him had been unearthed. Angeli bears a strong resemblance to Adolf Hitler.

Health Standards

Need Uniform Basic Regulations Covering Contagious Diseases

The Dominion Council of Health, stressing the need for uniform basic regulations covering control of the communicable diseases throughout Canada, has requested the Dominion Government to prepare standards for regulations which might be applied to all provinces, the Health and Welfare Department announced at Ottawa.

The request was made following the council's 49th annual meeting at Ottawa at which discussion also centred on the lack of uniform provincial legislation to determine responsibility for payment for public assistance or institutional care. The Federal Department also was asked to consider a draft residence bill, prepared by a committee of provincial health officials under the chairmanship of Dr. H. M. Cassidy of Toronto.

The Dominion Council of Health consists of provincial deputy health ministers, representatives of French and English-speaking women and of labor. Dr. G. B. Chisholm, Dominion Deputy Health Minister, is chairman.

Sir Wilson Jameson, chief medical officer of the British Health Ministry; Dr. J. B. Grant, of the Rockefeller Foundation, and Dr. W. A. McIntosh, of Toronto, Canadian representative of the Rockefeller Foundation's International Health Division, also attended the meeting.

Appreciation of the "notable contribution" made to public health in Canada by the late Dr. J. J. Heagerty, of Ottawa, was recorded at the meeting.

PLUMBING PREFERRED

Amsterdam University professor envisions a cosmic ray bomb a billion times more powerful than the atomic bomb. We're beginning to wish more of our scientists had taken up plumbing instead, says the Windsor Star.

Experimental Farm Growth Traced By Dr. E. S. Archibald On Sixtieth Anniversary Of System

MUCH has been contributed to Canada's progress, internationally as well as internally, Dr. E. S. Archibald, superintendent of the Dominion Experimental Farms, told members of the Ottawa Rotary Club at a luncheon meeting. The occasion of Dr. Archibald's address was the 60th anniversary of the founding of the Experimental Farm system in Canada.

"In 1886, when the Experimental Farms came into being, the year the first train left Montreal for Vancouver, agriculture was at the lowest ebb in the history of Canada," Dr. Archibald said.

"The West was undeveloped, with only 60,000 acres of wheat in the Red River Valley. Dr. William Saunders, a man of great vision, chosen to supervise the work of the Experimental Farms, decided the great western areas could be developed. He travelled to Siberia, to the Himalayas, and other far corners of the earth to obtain hardy varieties of wheat, but those he found were inferior both as to quality and as to yield.

"He then started a program of plant breeding, a program which produced Marquis wheat, still the standard of quality the world over," he continued. "He began the production in Canada by cross-breeding of plants adapted to Canadian conditions."

He outlined agriculture's progress from 45 million acres in 1886 to 174 million acres at present; from the export of 3,500,000 bushels of wheat, mostly from Ontario, to 2,900,000,000 bushels at present, mostly from the West; and from an annual budget of \$73,000 in 1886 to \$3,900,000 today.

"The reputation of Marquis wheat put Canada in a special category on world markets," he said. "Diseases and blights, however, increased to the point of causing \$100,000,000 damage a year. New breeds of wheat, such as Reward, Renown and now Redmond, were developed to stand up against these onslaughts, and have saved the people of Canada \$100,000,000 a year. The same thing has been done for oats, flax and so on.

"About 60 years ago, Ottawa was definitely not in the fruit zone, and could not produce early vegetables. Today, many new varieties of hardy fruits do well in Ottawa, and harder—though less delicious—varieties of apples can be grown for the farmers' own use as far north as Akilavik.

"Forage crops we could not grow here 60 years ago, now thrive as new strains suitable to our soil and climate have been developed. These crops include field corn and soybeans which have great value as protein food and as a source of vegetable oil.

"New diseases are always cropping up, as well as new biologic forms of the same disease," he revealed. "It is our job to meet these with preventative measures, and to breed new disease-resisting strains of plants. Agricultural engineering is still in its infancy, and the binder of 30 years ago is still standard equipment. We must attain lower production cost, and still maintain the quality of the product.

"Without a prosperous agriculture, there can be no prosperous urban community."

Introduced by Past-president Karl Conger, Dr. Archibald was thanked by President Dwight L. Donaldson, chairman.—Ottawa Journal.

Tall Building

Sky-Scraper On Wall Street Had To Drop To Fourth Place

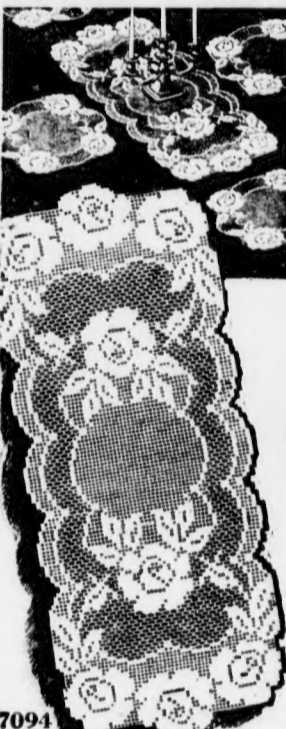

Bank of the Manhattan Company Building, scene of the recent plane crash in which five persons died, was designed to be the tallest building in the world—but never made the grade.

The towering, 937-foot, 71-floor skyscraper at 40 Wall Street was the first downtown building to challenge the superiority of the Woolworth Building, 792 feet high. The architects had orders to make it the world's tallest. But owners of the Chrysler Building upstaged the plan by a last-minute addition of a spire raising that tower to 1,048 feet.

Within five years after its construction 40 Wall Street had dropped to fourth place in height.

The 102-storey Empire State Building in midtown soon eclipsed all records.

Heirloom Crochet

by Alice Brooks

"Talk-of-the-table" filet crochet scarf and mats made doubly attractive by the lace stitch. You can make the scarf various lengths!

Done in string, this filet crochet scarf and mat set is in a simple, easy-to-follow design. Pattern 7094 has chart; directions.

To obtain this pattern send twenty cents in coins (stamps cannot be accepted) to Household Arts Department, Winnipeg Newspaper Union, 175 McDermot Avenue E., Winnipeg, Man. Be sure to write plainly your Name, Address and Pattern Number.

Our newest Needlework Book, 1946 edition, is yours for only Twenty Cents more—104 illustrations of designs for crochet, knitting, toys, home decoration, embroidery, and a Free Pattern for three potholders printed in the book.

Many Still Missing

Search Goes On For Children Carried Away From Lidice

An intensive search is being made for the lost children of Lidice, Czech village where the Germans carried out one of their worst atrocities.

Parties of Czechs are scouring Germany and Holland for the children, 98 still missing of 117 the Germans carried off after the village was destroyed in June, 1942, in reprisal for the assassination of Reinhard Heydrich, Nazi gauleiter of Prague.

Of seven children under a year old when Lidice was wiped out, one died and the others have been found in German foundling homes. Only 12 of 110 older children have been found so far.

COLD CURE

One of mankind's worst disease pests—the common cold—soon may be shackled by science, Dr. Selman A. Waksman, discoverer of the drug Streptomycin, predicted.

FOUR WINNERS DIVIDE \$108,000 IN POOL OF ICE BREAK-UP IN ALASKA RIVER—Winner of this year's Alaska ice pool was Mike Johnson of Sitka. All Alaska and the Yukon awaited the break-up of ice to determine the winner of the pool which has been held annually for 29 years. This year the pot totalled \$108,000. Watching the ice go out are Nenana townspeople—note the baby carriage and native girls. Alaska railroad bridge is in the background. One of the most spectacular, excitement-packed break-ups in the history of the Nenana ice pool gripped the northland when the Tanana river ice pack broke and determined winners of the big pool. Ice was swept clear in 15 minutes.

**THE NEED FOR
YOUR
SPARE
CLOTHING
IS
DESPERATE!****ONLY YOU CAN HELP**

Sickness and cold hang like a threatening cloud above the helpless millions over whose homes the rage of war has passed. Lack of clothing is one of the causes. You can help. Dig through your closets—dig out spare clothes—old shoes—bedding. Wrap your bundle in paper—tie it securely—tie boots and shoes in pairs. Take your contribution to your nearest Post Office or Collection Depot.

How Can I Help?

How can I help the second National Clothing Collection which the Dominion Government is sponsoring and which is being organized by the Canadian Allied Relief, under the national chairmanship of W. M. Birks of Montreal, in co-operation with local committees?

Many people have been asking themselves this question and in order to facilitate the work of the volunteer collectors the following is a partial list of the things that are badly needed by the millions of people in Europe whose homes were destroyed and belongings looted by the enemy during the war.

Suits, overcoats, uniforms, work clothes for men and boys. Infant clothes of all types.

Coats, dresses, aprons and smocks for girls and women.

Shoes in pairs, tied securely with string.

Caps, felt hats, knitted headwear, gloves, woollen socks, underclothing, piece goods, blankets, sheets and linens, draperies and remnants.

All washable garments and goods should be washed, but they need not be ironed. Other garments need not be dry-cleaned. Clothes without buttons are acceptable as supplies of buttons are now moving into lands where the clothing will be worn.

Items that cannot be baled should not be given. These include straw hats, feather beds, pillows and mattresses.

The aim of the National Clothing Collection, states William M. Birks, national chairman, "is the gift of at least one garment from every man, woman and child in Canada. That should not be too difficult in a country where the people are among the best fed and best clothed in the world."

Letters of good cheer may be attached to contributions, if the donors wish to send a message with their gifts.

Every organization and group have been invited and have promised their co-operation, and persons who are not associated with any such groups are invited to get in touch with their community chairman as soon as he or she is appointed, so that Canada's second contribution to Europe's suffering millions may be successful.

Salesman. Is your mother engaged?

Little Boy. I think she is married, sir.

Even when a small home goes to pieces, the nation it belongs to feels the bump.

THIS WEEK WE FEATURE—

SALT**Also OYSTER SHELL****These articles are very scarce!!**

THE UNITED OYSTER SHELL CRUSHERS ARE ON STRIKE. One side of their banner (a request Ottawa keep on the price ceilings, on the other side a demand for 25 percent more wages).

WE OFFER A HALF POUND TO A CUSTOMER BUT YOU CAN COME BACK AND BUY ANOTHER HALF POUND. TAKE OUR ADVISE AND BUY SOME BEFORE THE SUPPLY IS EXHAUSTED.
